

Case 2

This is a service utilization map for a 6 year old boy with autism. Starting at the top of the page follow the arrows to the various services for this child and his parents. Features to note in this map include:

- The family doctor appears to provide a direct pathway into specialty services
- When the family enters the Children's Specialty Services Centre and the Specialty Clinic there appears to be an "explosion" of access to multiple services
- Multiple services were facilitated by a behaviour therapist
- There is supplementary use of private services for speech and language therapy
- There is a considerable delay in access to the Intensive Behavioural Intervention Program, given the early identification.
