

Case 4

This is a service utilization map for a 5 year old boy with autism. Starting at the top of the page follow the arrows to the various services for this child. Features to note on this map include:

- The family doctor facilitates referrals to two specialists but these do not lead into specialty services
- The public health nurse serves as the facilitator into specialty services
- There appears to be an “explosion” of access to services once the child enters the Children’s Specialty Services Centre.
